

Project title: Update notification files & Create user custom filters

Project Value: Ksh. 450

Due date: 17 Feb 2020

Prerequisites: 1). visit <https://github.com/Kimmungai/project> 2). Click on Fork 3). On your computer run git clone [https://github.com/{YOUR\\_GITHUB\\_USERNAME}/project](https://github.com/{YOUR_GITHUB_USERNAME}/project)

Task one: Update notification files

1. Navigate to App > Notifications
2. For each file in this folder make sure the via (\$notifiable) has a return looking like this: return ['mail', 'database'].
3. In the toMail(\$notifiable) function, add relevant messages to inform the recipient of what the notification is about.
4. Use the ListingLive.php file as an example.

Task two: Create user custom filters

1. Navigate to App > CustomHelpers > User
2. UserFilter.php is complete and should act as a guide to you.
3. Your task is to fill up the functions in all the other files in this folder with the necessary code.
